

# SERVEN WASH

We are a young firm, dedicated to provide solutions to different companies, such as automotive, shipping, air, road, mining, agricultural, etc.

Always thinking and acting very friendly to the environment.

All our products are 100% biodegradable, clean, useful, practical and efficient.

Since we started in 2008, we have based our policy, service, products, company and business in environmental care and respect.

We try to develop our performance, thinking of a better future option to our society.

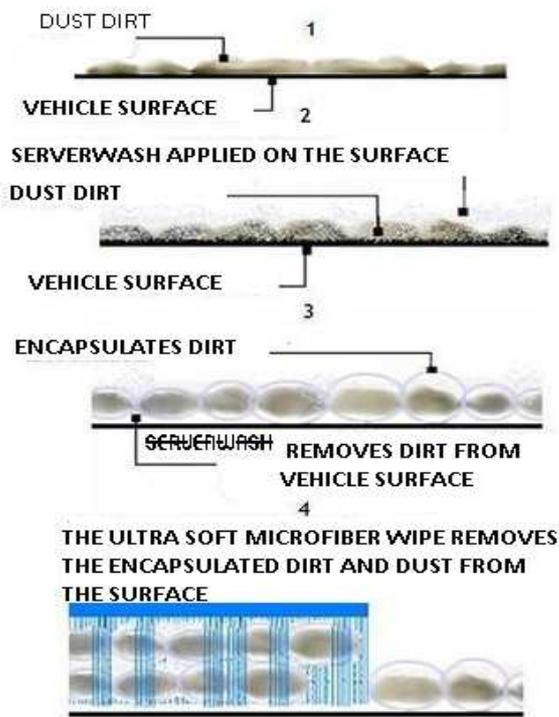

We are situated in Bahía Blanca city, head of the Southwest region of the Buenos Aires Province, Argentina.

## **SERVEN WASH**

There exist no more reasons to waste water in car washing!!!

SERVEN WASH is 100% ecologic, efficient and practical. It washes, waxes and protects the vehicle paint, without damaging it, in just one step and taking no more than 40 minutes.

It acts encapsulating and removing all kind of dirt, depositing a hard wax film, getting a professional and bright finish.

It protects from UV rays, dust, road bugs, bird droppings, tree resin, etc.

## **How SERVEN WASH works**

Unlike conventional washing using water, shampoo, brushes, cloths and other, SERVEN WASH does not scratch paint. Its revolutionary formula encapsulates and removes surface dust and dirt, which are absorbed by SW wipes.

It cleans it thoroughly, leaving a protective layer of hard and bright wax.

## **SERVEN WASH qualities**

This product is 100 % ecologic. It washes, waxes, brightens and protects the vehicle paint, biodegradable, nontoxic and practical.

It repels dust and dirt, preventing them from sticking easily, and most importantly, *without using a drop of WATER.*

It reduces water consumption. It's effortless and it can be used anywhere, anytime. It is easy to remove. It does not litter or leave any residue wherever the vehicle is.

## ***SW wipes***

The best way to understand SW wipes performance is by seeing a cross section of a fiber cloth.

Its special form makes dirt and liquids stay inside the fibers.

The fibers are separated into two, combining and creating small hooks that act as magnetic clutches that hold waste.

That is why SW wipes have two unique features:

1. They clean deep, **WITHOUT SCRATCHING.**
2. They can absorb between 7/8 times its weight in water. (Double the cotton).

Their unique design removes dirt, greases, oil stains, excrements, etc.

SERVEN WASH does not work with grids, chamois, cleaning rags, cotton clothes.

## ***How to use***

1. Spray the surface of the vehicle, in sections of 50x50 cm.
2. Wipe the section with SW Wipes doing slight pressure, so as to remove dirt.
3. Immediately after that, rub quickly with another SW Wipe to make the zone shine.

To wash a midsize car in the traditional way, using buckets, clothes, sponges, hoses and pressure washers, we waste between 60 and 300 liters of water!  
**SERVEN WASH** does not scratch, it polishes and protects in just one step.

As vehicles are not moved from one place to another to be washed, we avoid well known risks as scratches, little collisions and rough handling.

Vehicles are washed in the place where they are, without polluting the workplace, leaving neither puddles nor waste in the environment.

**SERVEN WASH** does not need electrical energy for pumps and pressure washers. For this reason, the cost of this service is totally reduced as well as WATER.

You get a significant financial saving compared to traditional washing where it is necessary the use of buckets, brushes, cloths, washers, hoses, shampoo, cleaning fluids, etc. to reach the final finish.

You can reduce the washing time, depending on how dirty the vehicle is.

We develop a vanguard system that gives solutions and permits companies and organizations to reduce costs and improve profitability.

We are always applying our knowledge in favor of ecology and environmental care. Our products are 100% ecologic, practical, efficient and economic.
