Digital Workforce

Content Intelligence: Avoid friction and focus on valuable information for the business to make strategic business decisions.

Process Intelligence: High operative efficiency, zero errors, and low time tracking and costs.

Hyperautomation: Transform your company into the most intelligent and efficient one by joining mindset, technologies, and process automation.

Intelligent Automation: Stand out from the competitors and increase your income rapidly with precision and scalability.

Robotic Operating Model: Sturdiness, agility, scalability, and innovation. The best model for the intelligent automation of processes.

Cloud & Devops

Cloud: Store, process, and manage your company's data in real-time.

DevOps: Agility, productivity, and IT integration will empower your company like never before.

Infrastruktur: Leave the company's computer security in the hands of our experts. Worry only to see the performance improvements.

Engineering: We make your ideas come true. We build agile and adaptable software according to the specific needs of each project.

Data & Ai

Big Data: Make strategic decisions based on structured data.

Data Mining: Exploit metadata and transform your company into the most innovative in the sector.

Machine Learning: Build and deploy predictive machine learning models based on your data.

IoT: Make any object bright and get data strategies for fluid communication between people.

Digital Strategy

Business Model

Discovery of opportunities and design of a comprehensive business strategy.

Digital Transformation

Build digital, agile, dynamic, and profitable businesses.

Customer Experience

Customer loyalty through tailor-made experiences.

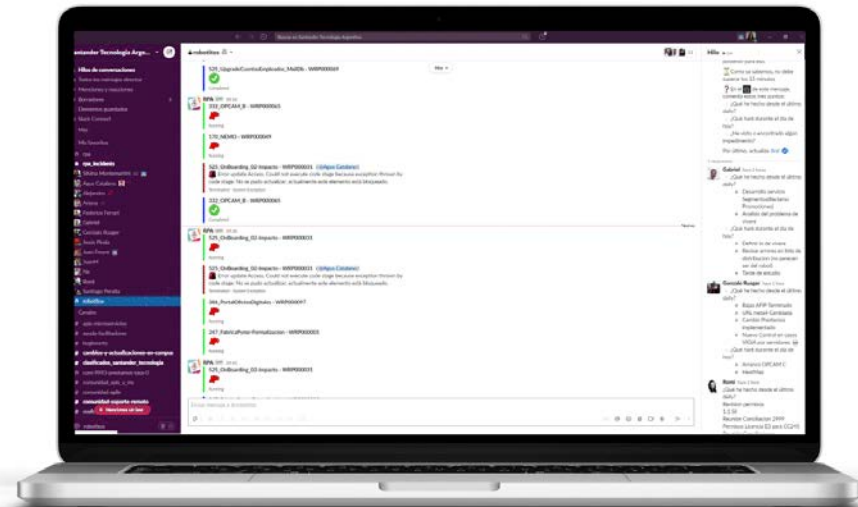

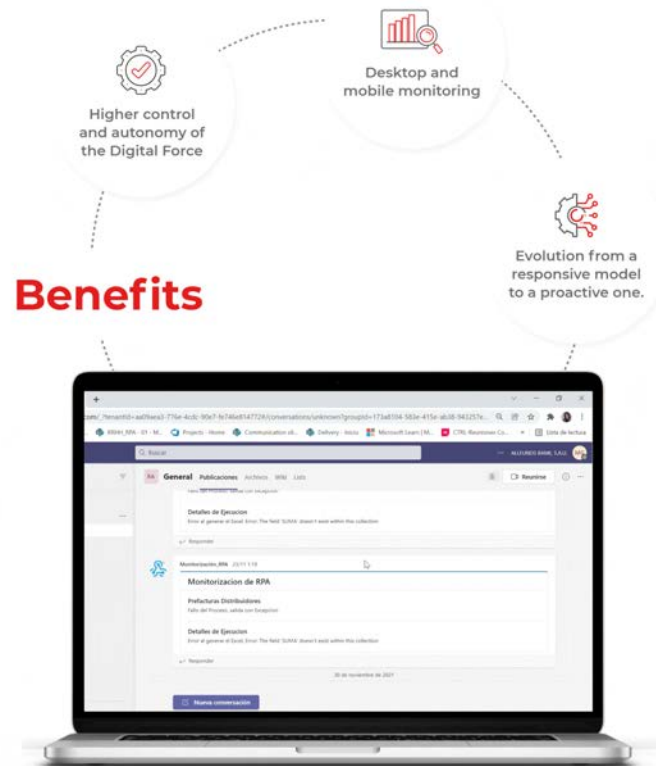

Digital Growth

Exponentially boost your business and get concrete results.

The Future of RPA: Slack Service

We merge Slack Service with Digital Workforce to boost the reports and creation of alerts from a real-time process by sending automatic notices to a company user or a team of users simultaneously. Thus, we can inform the status of processes, notify the exception's description and upload logging files.

The Future of RPA: Teams Service

We merge Teams Service with RPA to monitor the Digital Workforce.

We have developed and implemented a connector between Blue Prism and Microsoft Teams so that each digital worker can notify the performance in production in real-time.

The Future of RPA: Discovery BI

Discovery BI works automatically based on the information from the forms completed by the users. This tool allows to

Have higher organization and agility to make strategic decisions based on the organization's objectives.

Centralize the information and demand of processes.

Analyze KPIs such as Level of Criticality, Development Effort, Impact, Savings, Volumetrics, Security, Frequency Processing, and General Overview.

The Future of RPA: Robot Telemetric

One of the Project's objectives is the BI platform connected with the Digital Workers. Robot Telemetric measures the different aspects of the processes in real-time to quantify the efficiency and agility achieved in each process based on the company's objectives.

Independent database, which does not affect Blue Prism and obtains higher autonomy.

KPIs measurement in real-time within a production environment.

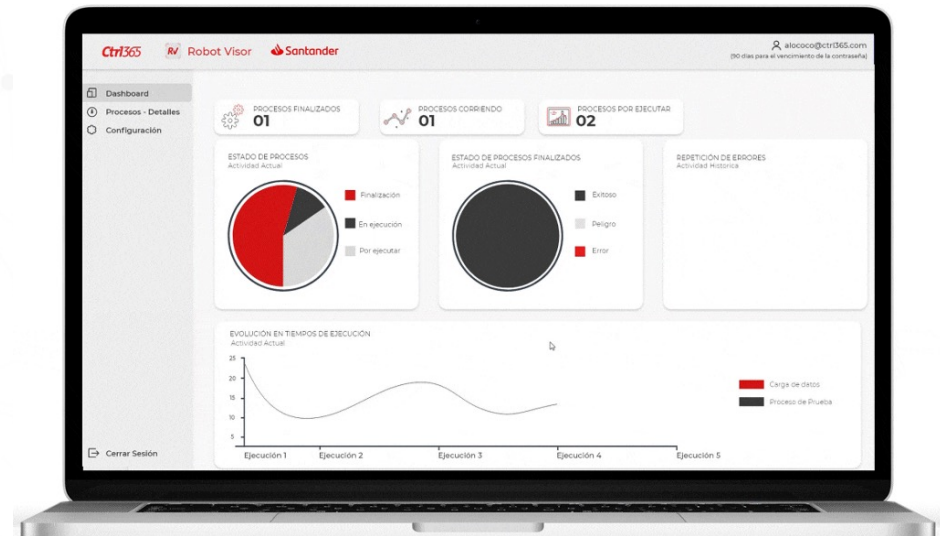

Centralization of information and higher transparency

Creation of performance reports for the different areas and the board.

The Future of RPA: Robot Visor

This innovation allows you to see the processes of the Digital Workforce in real-time. Robot Visor is a solution PaaS (Platform as a Service), completely integrable with Active Directory and RPA for managing roles and license segregation.

Ecosystem: Digital Exchange

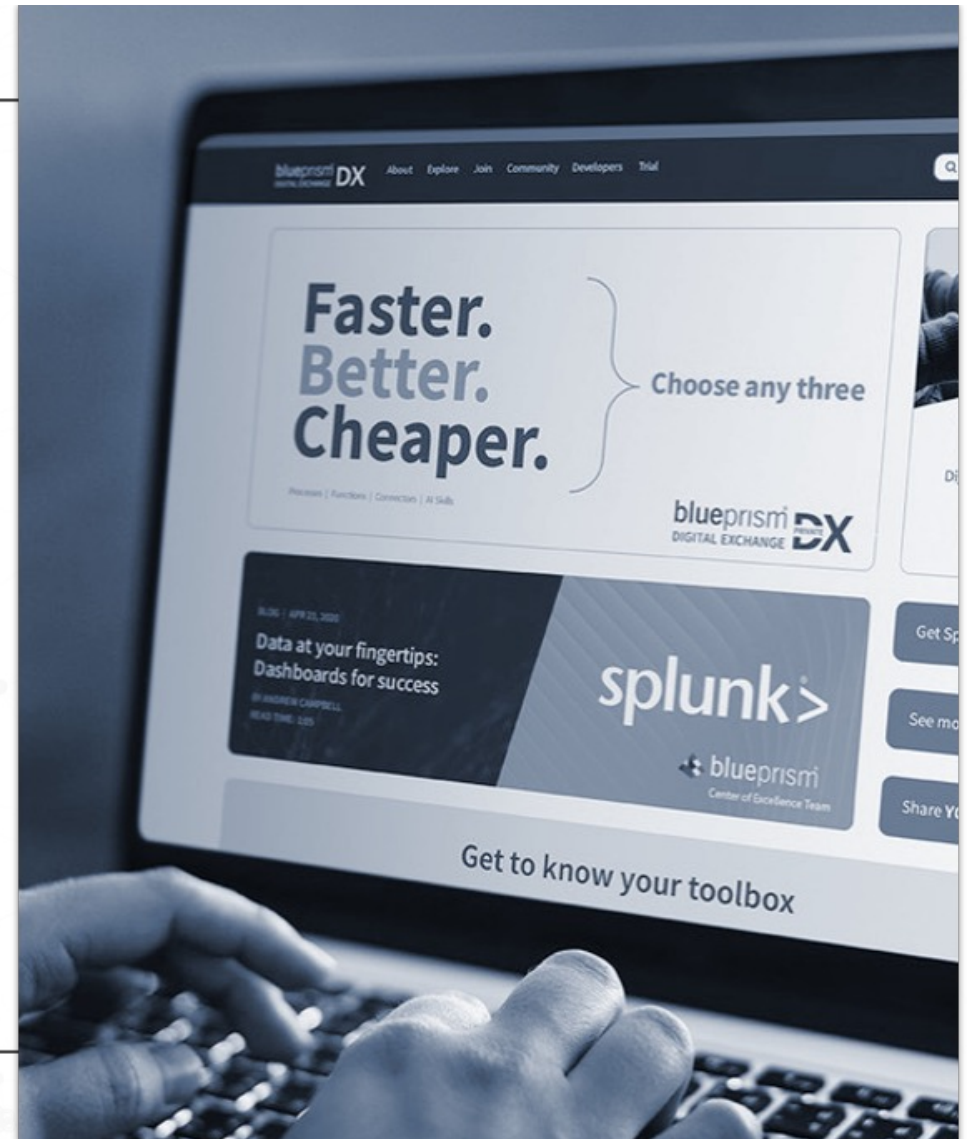

We empower the internal capabilities of organizations through a centralized and scalable Workforce.

Our team members are experts in each of the Blue Prism roles.

In Ctrl365, we have real experience assembling and deploying a center of excellence (CoE) based on a sturdy operating model with a fast-learning curve that will assure you an optimal ROI.

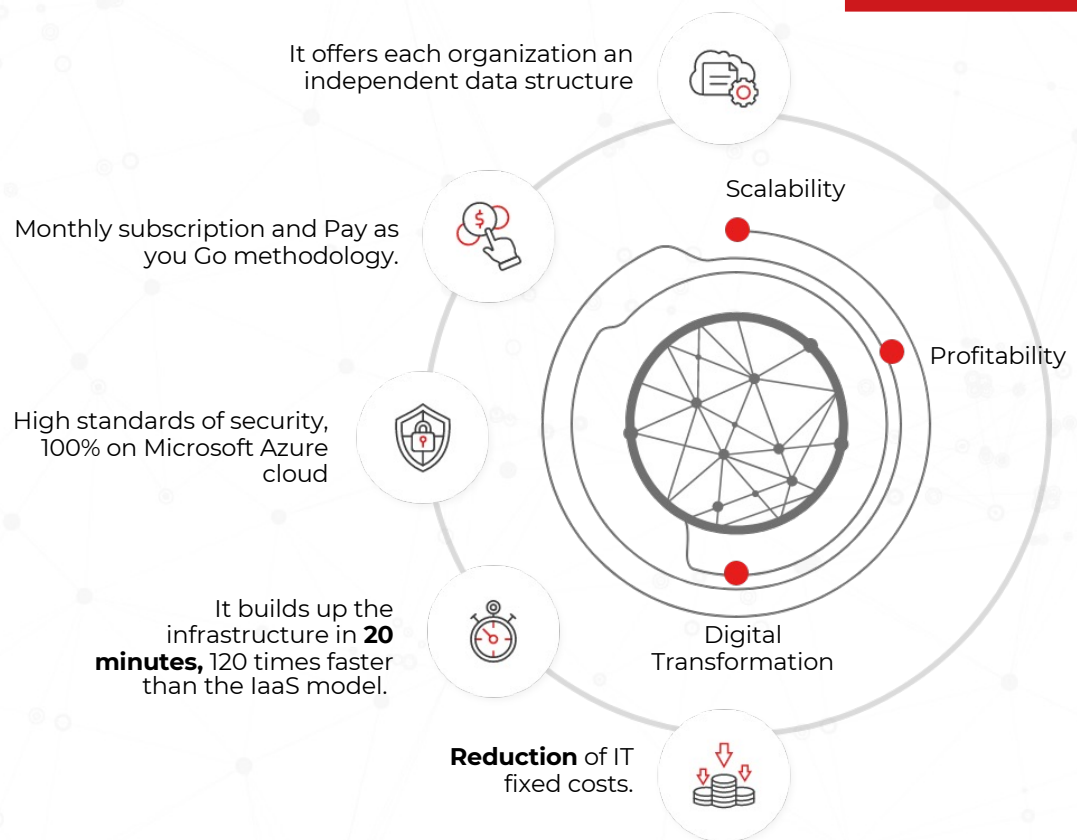

We grant:

- Infrastructure
- Quality
- Security
- Availability

The Future of RPA: Robot as a Service

We erase the barriers to the entrance by developing a solution that warrants the same agility, efficiency, scalability, and security for a minimum cost.

The Future of Work: Academy

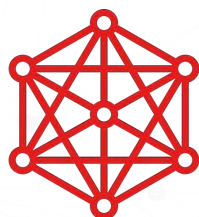

We aim to train people for the market of the future.

We believe in the impact of the new digital technologies and seek that everyone can be part of this revolution and its benefits.

Thus, we offer elite training in high technology based on soft skills that truly allow people to enter the labor market.

Moreover, we foster our students' insertion into a wide range of tools for interaction with the market.
